- **Future management of kokanee, trout and other fish species**
- **Connects existing public lands**
- **Ponderosa pine forest and riparian habitat**
- **Big game and waterfowl**

Recreational Values

- **Public lake access**
- **Fishing**
- **Hunting**
- **Wildlife viewing**

Chapman Lake Recreation Access

Agency	Department of Fish and Wildlife
Estimated Acres	80
Existing Uses	Privately owned. Portion of the land has been managed for wildlife and grazing. Other portion is partially developed and includes a resort that has been closed for several years.
Threats	Loss of recreational access to Chapman Lake, a 128-acre mixed species water that includes the only kokanee fishery in the district.
Intended Uses	This acquisition will restore much needed access to Chapman Lake for fish management and recreational opportunities.
Project Description	This proposal for the acquisition of 80 acres includes ponderosa pine forest and approximately 1,400 feet of riparian habitat along the south bank of Chapman Lake. The property is surrounded on three sides by DNR land. This acquisition will connect existing sections of public land and restore boater access to Chapman Lake. This land includes a boat launch which, until the resort closed, was the sole source for public boating access to Chapman Lake.
